

Name:

Worksheet Two

Part One: Choose an Object and Part Two: Functions Search Challenge

Part One: Choose an Object

Now that you have looked closely at two objects from the **Collecting250** site, you get to choose your own object of interest from the collection. Choose an object, then fill in the information here as you did for the tea set and the nkisi.

Sketch the object:

Name of Object:

When was it made?

Who made it, and where?

Where is it now? (Include the city.)

What is it made of?

Imagine meeting the maker and/or a user of this object. Think of a question that you would like to ask and write it here. How could you possibly find out more?

What job does this object do?

How else does this object function?

Part Two: Functions Search Challenge

You and your partner will choose function cards from the pile. Your job is to visit the galleries and find as many objects as you can that match the function listed on the card. Keep a record on this sheet. Your teacher will set the time. Make sure you include enough information to be able to find the objects again to get credit (and win!)
